Experimental results of a proto-type boost converter, converting the universal ac input voltage to 400 V dc at 3.4 kW, are given, and the results are compared with an interleaved boost converter to verify the proof of concept and the reported analytical work. In this paper, a phase-shifted semi-bridgeless boost power-factor-corrected (PFC) converter is proposed to simplify the current-sensing technique for the semibridgeless PFC converter.
