This convenience alone suggests the appropriateness of a designated code sequence for CAD/CAM. Because CAD/CAM technology is cutting edge, a higher reimbursement from insurance carriers might be reasonable. The reality is, however, that there are no special codes for CAD/CAM restorations. The ADA coding system is revised every two years. (The ...

Tips: Coding CAD/CAM Restorations

This process is done with the help of CAM software which stands for Computer-Aided Manufacturing. CAM software can generate G- Code from a CAD design or an image. This software uses the models and assemblies created in CAD software to generate toolpaths that drive machine tools to turn designs into physical parts.

Key Differences Between CAD and CAM. Computer-aided design (CAD) involves the use of computers for transforming the elementary idea of product into a detailed engineering design. The evolution includes the creation of product's geometric models, which can further be manipulated, analyzed and refined.

There are cases where you can't "program" your model in terms of those 3 common CAD features, while you can in an OpenSCAD file. But they are

few and far between. And the way the other programs do it is not only easier to "write" by clicking buttons on a UI, but much, much easier to "read" by viewing the sketch drawing.

For simple parts, this is not too hard. But for more complex parts, it is often easier to keep track of what's going on and simpler to tell the CAM software what it needs to know if you have a 3D model. The good news is that it is possible to convert a 2D CAD file such as a DXF to a 3D Model pretty easily in most CAD packages.

A 3D only CAD/CAM program for generating CNC code from existing models. The focus is on importing an existing 3D model (STL files) and providing basic manipulation capability, like rotation, scaling, etc. It does not support building 3D models from scratch. GCode and Shoptbot toolpaths are generated from the model. Multithreaded.
