Verified Purchase. There are, at present, only four laws of thermodynamics acknowledged by science. A recent book, deeply rooted in the four laws but going in a new direction is, Design in Nature: How the Constructal Law Governs Evolution in Biology, Physics, Technology and Social Organization. Written by leading thermodynamics theorist Adrian Bejan and J. Peder Zane, this is probably one of the most important books on the social and political aspects of thermodynamics written in the past ...

Design in Nature presents some interesting new thoughts on flow systems and the nature of the biosphere. However, I don't think it really achieves its purpose of introducing these thoughts to a lay audience. Note: I was an English major. If you are a scientist or a mathematician, you may well get a lot more out of it than I did.
