The aim of the study was to assess the exercise capacity (VO₂peak) of children undergoing leukemia treatment and to compare the results with healthy children. Furthermore, we assessed the influence of treatment methods on the level of exercise capacity and the increase in sedentary behaviors. The study comprised 21 children (12 boys and 9 girls) undergoing treatment for acute lymphoblastic ...

Matlock, or rather the three Matlocks for Matlock Bath is entirely distinct from Matlock Bridge or Matlock Bank is the second of the two great Derbyshire spas, but wholly different in character from its sister, Buxton. Here the scenery is far less wild, but perhaps, on the whole, more ...

Full text of "The Peak country" - Internet Archive

The peak power recorded is the maximal power output achieved for 5 seconds of the test, usually the first 5 seconds. The anaerobic capacity, or average power, is recorded and averaged over the entire 30 seconds of the test. The lowest power output is an average of the lowest 5 seconds seen during the test, usually the last 5 seconds.

Wingate Anaerobic Test Peak Power and Anaerobic Capacity ...

Background: Written asthma action plans based on personal best peak expiratory flow (PEF) consistently improve health outcomes, whereas those based on predicted PEF do not. Guidelines state that personal best PEF should be assessed over 2–3 weeks during good asthma control, but it is unclear how long to wait after commencing or changing treatment.

When can personal best peak flow be determined for asthma ...

Hornby (2004) defines peak performance as the point when somebody is best and most successful in performing a task. Athletes and coaches always think they must only practice longer and harder to attain this peak performance.

Psychological Preparation for Peak Performance in Sports

screen. Forty three and 66 studies met the inclusion criteria and were included in the systematic review for viral load and ...

Viral loads peak before symptom onset in COVID-19

Gas exchange data shall be evaluated every 10 seconds and the peak oxygen consumption (peak $\dot{V}O_2$) shall be considered the maximum value obtained during the last 20 seconds of exercise. The main parameters to be determined are: maximum functional capacity, peak $\dot{V}O_2$, slope of the $\dot{V}E/\dot{V}CO_2$ ratio, and chronotropic incompetence variables.

Short-term Effects of Dapagliflozin on Peak $\dot{V}O_2$ in HFrEF

...

Peak filling rate increased significantly from 1.55 ± 0.52 at rest to 3.43 ± 1.1 end-diastolic volume per second at peak exercise.

Effects of Left Ventricular Peak Filling Rate on Exercise ...

n the inspiratory flow (\dot{V}) rate. Although the impact of narrowing on low inspiratory \dot{V} is small, its decelerating effect on the high expiratory \dot{V} is pronounced and, hence, easily detectable. Dividing the volume-flow curve of a passive expiration into five consecutive segments (slices) and calculating the time constants (τ_E) of these slices allows for analyzing whether and how ...
