Jellyfish Sting: Symptoms, Treatments, and More

A “bloom of jellyfish” is a seasonal abundance of a population increase due to reproduction or growth. Jellyfish blooms have closed beaches in the Mediterranean, clogged power plants in Sweden and halted fishing in Japan. Gelatinous zooplankton group-blooms are deeply rooted in evolutionary time due to asexual propagation, which occurs in ...

Jellyfish Blooms: Potential Problems and Possible ...

One of the largest problems with Jellyfish blooms is that people have to be extremely careful. Instead of a person just getting one sting from a single Jellyfish they may end up with dozens of them. This is why in various locations with known Jellyfish blooms the tourist attraction to the beach has significantly declined.

Deadly Jellyfish Blooms Predictable, New Study Finds

Jellyfish stings are relatively common problems for people swimming, wading or diving in seawaters. The long tentacles trailing from the jellyfish body can inject you with venom from thousands of microscopic barbed stingers. Jellyfish stings vary greatly in severity. Most often they result in immediate pain and red, irritated marks on the skin.

Jellyfish stings - Symptoms and causes - Mayo Clinic

In coastal areas where tourism is ubiquitous, jellyfish blooms often present a risk to recreational activities due to beach closures and stinging swimmers. During blooms, the incidence of jellyfish stings becomes much more common. In parts of the Mediterranean Sea the problem has been very pronounced.
