TCP/IP Ports and Sockets Explained On a TCP/IP network every device must have an IP address. The IP address identifies the device e.g. computer. However an IP address alone is not sufficient for running network applications, as a computer can run multiple applications and/or services.

TCP/IP Ports and Sockets Explained - Steve

For TCP/IP sockets, we want to specify the IP address family (AF_INET) and virtual circuit service (SOCK_STREAM). Since there's only one form of virtual circuit service, there are no variations of the protocol, so the last argument, protocol, is zero. Our code for creating a TCP socket looks like this:
