### The Structure of Economics: A Mathematical Analysis ...

A economic structure is a set of relations of production, which guarantee the production of goods and the provision of services on which the commercial exchange of all societies is based. By definition, an economic structure encompasses all production activities. It ranges from the agricultural and livestock sector to the commercialization of products and services, without neglecting all the processes of transformation that take place in the manufacturing industries.

Structuralist economics is an approach to economics that emphasizes the importance of taking into account structural features when undertaking economic analysis. The approach originated with the work of the Economic Commission for Latin America and is primarily associated with its director Raúl Prebisch and Brazilian economist Celso Furtado. Prebisch began with arguments that economic inequality and distorted development was an inherent structural feature of the global system exchange. As such,

There are four primary types of economic systems in the world: traditional, command, market and mixed. Each economy has its strengths and weaknesses, its sub-economies and tendencies, and, of course, a troubled history. Below we examine each system in turn and give ample attention to the attributes listed above.
